

BEDDING CARE INSTRUCTIONS

(please retain for future reference if required)

Congratulations! You are about to experience the sumptuous and indulgent qualities of silk bedding.

Because of the nature of the spinning and weaving process you may note small irregularities; these are not flaws or defects, but are the properties that give silk its individual characteristics. Your bedding has a care label attached which will advise the most suitable and recommended method of washing.

Whether hand washing or machine washing ensure that the washing agent used is specifically labelled that it is suitable for silk. Use of other washing agents may, over time, cause the silk fibres to harden and become brittle which will significantly reduce the useful life of the bedding.

- Hand wash in water 30°C maximum, or machine wash on the silk cycle, using a suitable washing agent. If your machine does not have a silk cycle then a standard 30°C cycle can be used providing the machine is either stopped before the spin cycle, or can be set to low speed (max 400rpm) short spin.
- Fabric conditioner can be used in the final rinse according to personal preference.
- Do not wring, bleach or scrub the bedding.
- Air dry after shaking off any excess water.
- Do not expose your bedding to bright sunlight (even indoors), or dry too near to radiators, as this will cause the colour to fade more rapidly, especially darker colours.
- Cool iron while the item is slightly damp. If overdry the item may be dampened with clean water from a mister. You may use a low steam setting if available.
- Regular cleaning of your silk bedding is recommended to maintain the freshness and condition of the bedding.

By following these guidelines you will experience the luxury of silk for many years to come. Enjoy!

MACHINE WASH
MAXIMUM 30°C

DO NOT
BLEACH

COOL
IRON

DO NOT
DRY CLEAN

DO NOT
TUMBLE DRY
